Create WO Plugin

Input data

Input for plugin is the xml file with description of work orders to be opened. XML file format is defined by xsd file *CreateWorkOrder.xsd*. By definition, filled Status type is string, but the only accepted values are:

- Open
- Closed
- Cancelled

In upper, lower or mixed case.

Typical xml file with definitions of work orders to open looks as follows:

Open Work Order

```
<?xml version="1.0" encoding="utf-16"?>
<ArrayOfWorkOrder>
<WorkOrder>
<WorkOrderNumber>TestW0Open</WorkOrderNumber>
<DateChanged>2015-01-13T00:00:00</DateChanged>
```

```

<DateDue>2015-01-24T00:00:00</DateDue>
<CustomerName>Test Customer 2</CustomerName>
<VehicleMake>Opel</VehicleMake>
<VehicleModel>Astra</VehicleModel>
<Status>Open</Status>
<VehicleYear>2007</VehicleYear>
<LicensePlate>ABC9876</LicensePlate>
<VehicleIdentificationNumber></VehicleIdentificationNumber>
<PanelCount>1</PanelCount>
<RepairType>Spot Repair</RepairType>
<Notes> Test 12345 </Notes>
</WorkOrder>
</ArrayOfWorkOrder>

```

Minimal information required to define work order to open looks as follows:

```

<?xml version="1.0" encoding="utf-16"?>
<ArrayOfWorkOrder>
<WorkOrder>
<WorkOrderNumber>TestSmallWO</WorkOrderNumber>
<Status>OPEN</Status>
</WorkOrder>
</ArrayOfWorkOrder>

```

After processing, input files are moved to folder: Succeeded or Failed; files containing multi work orders to create are split into single work orders. Filename schema is defined as follows:

- **Originalfilename_WorkOrderNumber_UniqTimestamp.xml** for files with multi work orders,

Originalfilename_UniqTimestamp.xml for files with one work order.

Output Data

If 'Response' flag have been set 'true' by the configuration, plugin will create response xml file. Format is defined by xsd file *CreateWorkOrder-Response.xsd*. Example of response file looks as follows:

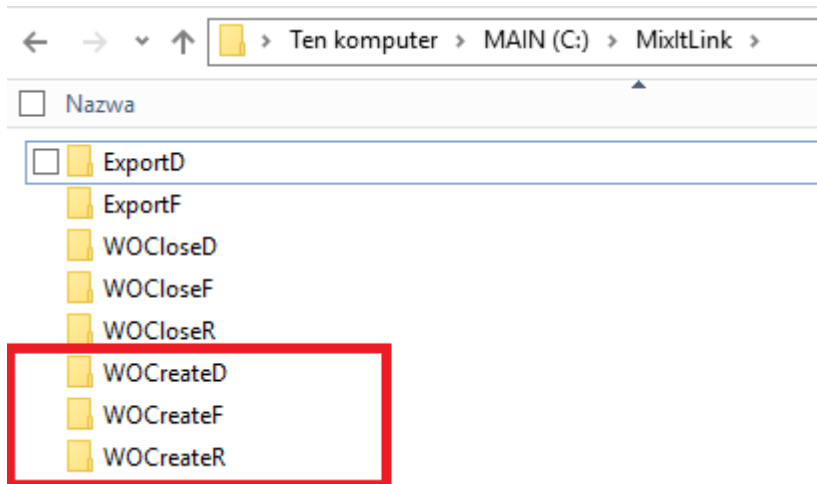

Response

```

<?xml version="1.0" encoding="utf-8"?>
<CMCreateWOResponse xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xmlns:xsd="http://www.w3.org/2001/XMLSchema">
  <WorkOrder>
    <WorkOrderNumber>TestSmallWO</WorkOrderNumber>
    <Status>OPEN</Status>
    <WorkOrderID>53</WorkOrderID>
    <ErrorDescription />
  </WorkOrder>
</CMCreateWOResponse>

```

Example of response file while error occurred, in ErrorDescription filed is located detail description of error or exception:

Default folders structure

Default folders structure for plugin, created in the installation time looks as follows:

Close WO Plugin

Input data

Input for plugin is the xml file, containing description of work orders to be closed. XML file format is defined by xsd file CloseWorkOrder.xsd. By definition filled Status type is string, but the only accepted values are:

- Open
- Closed
- Cancelled
-

In upper, lower or mixed case.

Typical xml file with work order to close looks as follows:

Work Order Close

```
<?xml version="1.0" encoding="utf-8"?>
<ArrayOfWorkOrderClose>
<WorkOrder>
<WorkOrderNumber>TestW00open</WorkOrderNumber>
<Status>CLOSED</Status>
<Notes>Notes</Notes>
</WorkOrder>
</ArrayOfWorkOrderClose>
```

After processing, input files are moved to folder: Succeeded or Failed; files containing multi work orders to close are split into single work orders. Filename schema is defined as follows:

- Originalfilename_WorkOrderNumber_UniqTimestamp.xml for files with multi work orders,
- Originalfilename_UniqTimestamp.xml for files with one work order.

Output Data

If 'Response' flag have been set 'true' by the configuration, plugin will create response xml file. Format is defined by xsd file CloseWorkOrder-Response.xsd. If 'Include Material Usage' flag have been set 'true' by the configuration, response file will contain up to date usage of materials for closed work order.

Simple example of response file looks as follows:

Response

```
<?xml version="1.0" encoding="utf-8"?>
<ArrayOfWorkOrderCloseWorkOrder xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xmlns:xsd="http://www.w3.org/2001/XMLSchema">
  <WorkOrderNumber>TestW00open</WorkOrderNumber>
  <Status>CLOSED</Status>
  <Notes>Notes</Notes>
</ArrayOfWorkOrderCloseWorkOrder>
```

Example of response file with material usage attached:

No input data for this plugin.

Output data

Output from plugin is xml file, which will be created and then updated for each plugin run. For 'Export Mixes', format is defined by xsd file *MaterialExportMix.xsd*, for 'Export Work Orders', xml file format is defined by *MaterialExportWorkOrder.xsd*

Plugin Configuration

A detailed description of the XML plug-in configuration can be found in the **MixItLink user manual**. By default, it is only possible to export painting materials from the Color Manager. In case the user chooses NPM export option from the host configuration tab and checks the connection to the RMP database, the Export non-paint material field will appear in the configuration view.

Material Change Scenarios

The standard plugin may export the data in two possible methods:

- Complete usage per work order, which is a “snapshot” of the material usage per WO at the time of export, including all previous mixes.
- Differential export, where the changes on the specific WO are exported versus previously exported data. As per ColorManager logic, the changes may be positive or negative.

Examples of data changes in the ColorManager system and the corresponding data export can be found in the attached table. The values given in the table are examples.

		Complete Usage		Differential Usage		Mix content after change		
	WO	Product	Value	Product	Value			
	Mix 1, (20\$ Prod1 & 20\$ Prod2) allocated to WO 1					Mix	Product	Value
Create one repair order and one mix (color only) for this order.	WO1	Product #1	20	Product #1	20	1	Product #1	20
		Product #2	20	Product #2	20		Product #2	20
	Mix 1 distributed 30%/70% between WO1 & WO2							
Reassign repair order (add another repair order to mix – split between wo is 30-70%)	WO1	Product #1	6	Product #1	-14			
		Product #2	6	Product #2	-14			
	WO2	Product #1	14	Product #1	14			
		Product #2	14	Product #2	14			
	Mix 1 change: Product #1 extra 4\$ used					Mix	Product	Value
Tint color mix (add extra volume for used toners)	WO1	Product #1	12	Product #1	2	1	Product #1	24
		Product #2	10				Product #2	20
	WO2	Product #1	12	Product #1	2			
		Product #2	10					
	Mix 1 change: Distributed extra product between WO1 & WO2 (50% / 50%)							
Mix RTS (one mix with two orders)	WO1	Product #1	12					
		Product #2	10					
		Product #3	5	Product #3	5			
	WO2	Product #1	12					
		Product #2	10					
		Product #3	5	Product #3	5			
	Mix consumption cancelled from RO1 and RO2							
Reassign repair order (remove form mix all assigned repair orders – wix will be exist without any repair order)	WO1	Product #1	0	Product #1	-12			
		Product #2	0	Product #2	-10			
		Product #3	0	Product #3	-5			
	WO2	Product #1	0	Product #1	-12			
		Product #2	0	Product #2	-10			
		Product #3	0	Product #3	-5			

Create one repair order and one mix (color only) for this order

In this case you have to create one order for which you will create one mix (colour only). For this scenario you will receive information about the full use of the material for each configuration.

MixItLinkWS Plugin

Definition

MixItLinkWS plugin provides the System local Web Service functionality. Web Service SOAP definition is described in *MixItLinkWS.xml* file. MixItLinkWS defines 5 operations:

- CreateWO
- CloseWO
- NewList
- DetailMix
- DetailWorkOrder

Each operation has authorization item MixItLinkAuth, it is defined as follows:

MixItLinkAuth

```

<xs:schema elementFormDefault="qualified"
targetNamespace="http://schemas.datacontract.org/2004/07/MixItWebService"
xmlns:xs="http://www.w3.org/2001/XMLSchema"
xmlns:tns="http://schemas.datacontract.org/2004/07/MixItWebService">
    <xs:complexType name="MixItLinkAuth">
        <xs:sequence>
            <xs:element name="password" nillable="true" type="xs:string"/>
            <xs:element name="user" nillable="true" type="xs:string"/>
        </xs:sequence>
    </xs:complexType>
    <xs:element name="MixItLinkAuth" nillable="true" type="tns:MixItLinkAuth"/>
</xs:schema>

```

Operation CreateWO

Request to create work order is the same as xml file for CreateWO Plugin. Example of simple request that creates one work order:

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:tem="http://tempuri.org/" xmlns:mix="http://schemas.datacontract.org/2004/07/MixItWebService"
